

Lead Free Tackle Exchange

Lead is a toxic metal that can poison mammals and birds, such as loons and eagles. It is found in most fishing jigs and sinkers.

This is your chance to exchange your lead fishing tackle for tackle made of non-poisonous materials, such as tin, bismuth, steel, and tungsten-nickel alloy.

Bring your tackle along for this free exchange!

Thanks to the Rice Lake National Wildlife Refuge and Minnesota Pollution Control Agency for supporting this exchange!
