

Lakeshore Mix

The Lakeshore seed mix contains a variety of moisture-tolerant and emergent species that thrive near the water's edge. Contains shorter height grasses, more sedges, and mixed height wildflowers.

Height: 2 - 4' sedges & grasses, with taller flowering forbs

Prefers moist to wet soil in full sun.

Lakeshores and riverbanks are perfect for this seed mix

Seeding Prep: Remove existing vegetation and likely rake the soil to prep the seed bed. Spread half the mix over the entire area then go back and seed over the area again.

Maintenance: Routine cutting, no shorter than 7 inches from the ground. Keep up on weeding to give the native species room to grow.
